taschai.tech | github.com/Taschai-Srilampung

PROFESSIONAL SUMMARY

R&D Technician with hands-on experience in IoT prototyping, embedded systems, and full-stack web development. Skilled in assembling Raspberry Pi hardware, designing servo gimbal and battery circuits, and building real-time control platforms with WebSocket and video streaming. Computer Science graduate from Chulalongkorn University seeking to grow as a Software Engineer or Robotic Software Engineer.

WORK EXPERIENCE

R&D Technician (IoT & Embedded Systems) *November 2025 – Present*
Tiny Stack Co., Ltd., Bangkok, Thailand

- Assembled Raspberry Pi-based RC vehicle prototypes; wired motors, servos, cameras, and sensors based on GPIO pinout research and component datasheets.
- Built a 2-axis camera gimbal (Pan/Tilt) with SG90 servos and hardware PWM (pigpio), supporting button and mobile gyroscope control.
- Designed battery monitoring and charging circuitry for simultaneous Pi and motor power from a shared battery with ADC-based level reading.
- Contributed to the full-stack web platform (React, Node.js, WebSocket) for real-time vehicle control with live UDP/MJPEG video streaming.

Smartphone Repair Technician *March 2025 – Present*
Khumsup Mobile Repair Shop, Bangkok, Thailand

- Performed component-level repairs: screen replacements, soldering, hot-air rework (iPhone Face ID), and battery installations.
- Handled firmware flashing, bootloader recovery, and system restorations for iOS and Android devices.

EDUCATION

Chulalongkorn University, Bangkok *2020 – 2024*
Bachelor of Science in Computer Science | GPA: 3.23

TECHNICAL SKILLS

Embedded & IoT:	Raspberry Pi (GPIO, PWM, ADC), ESP32, Arduino, Servo Motors, Sensor Integration
Programming:	Python, C/C++, JavaScript, Node.js, React
Systems & Tools:	Linux, Git, Docker, WebSocket, UDP Streaming, REST APIs, PM2, VS Code
Hardware:	Soldering, Hot-Air Rework, Multimeter, Circuit Design, Battery Systems

PROJECT EXPERIENCE

TinyRC – Real-Time RC Vehicle Control Platform *Nov 2025 – Present*
Tiny Stack Co., Ltd.

- Contributed to a web system enabling users to operate RC vehicles via browser with real-time WebSocket control and live video streaming from dual Raspberry Pi cameras (gimbal + rear).
- Implemented user queue management, device fingerprinting, free-trial gating, and an admin analytics dashboard.

Equipment Management System (Senior Project) *2024*
Chulalongkorn University | github.com/Taschai-Srilampung/equipment-project-myserver

- Developed full-stack web app (React + Node.js + Strapi + MySQL) for university equipment tracking with role-based access, maintenance workflows, and Excel export. Deployed via Docker.

Vehicle & Barrier Detection (YOLOv8) *2024*

- Trained custom YOLOv8 model on manually labeled Google Maps imagery for vehicle and barrier detection.

CERTIFICATIONS & ACTIVITIES

- AI Hackathon – Aiful Corporation (2024)
